

Re-Imagining SAP S/4HANA Transformation with Infosys and SAP Signavio

Businesses today are dealing with massive disruptions that pose significant challenges to their resilience and ability to not only adapt to change quickly, but also to take advantage of new opportunities. That's why they are embarking on S/4HANA led business transformations to design and evolve into new age businesses. However, S/4HANA led transformations and ERP modernization have their own challenges.

So, how can enterprises...

Infosys + SAP SIGNAVIO

offers a new approach to process transformation, from the inside out.

Traditional business process transformation was a time-consuming, effort-intensive one-off activity that involved SME workshops, time studies, surveys, and interviews with business teams to identify problem areas. The information collected then had to be collated and analyzed for the decision makers spearheading the transformation process. A digitized approach eliminates the time and labor involved, and can be done as a continuous process.

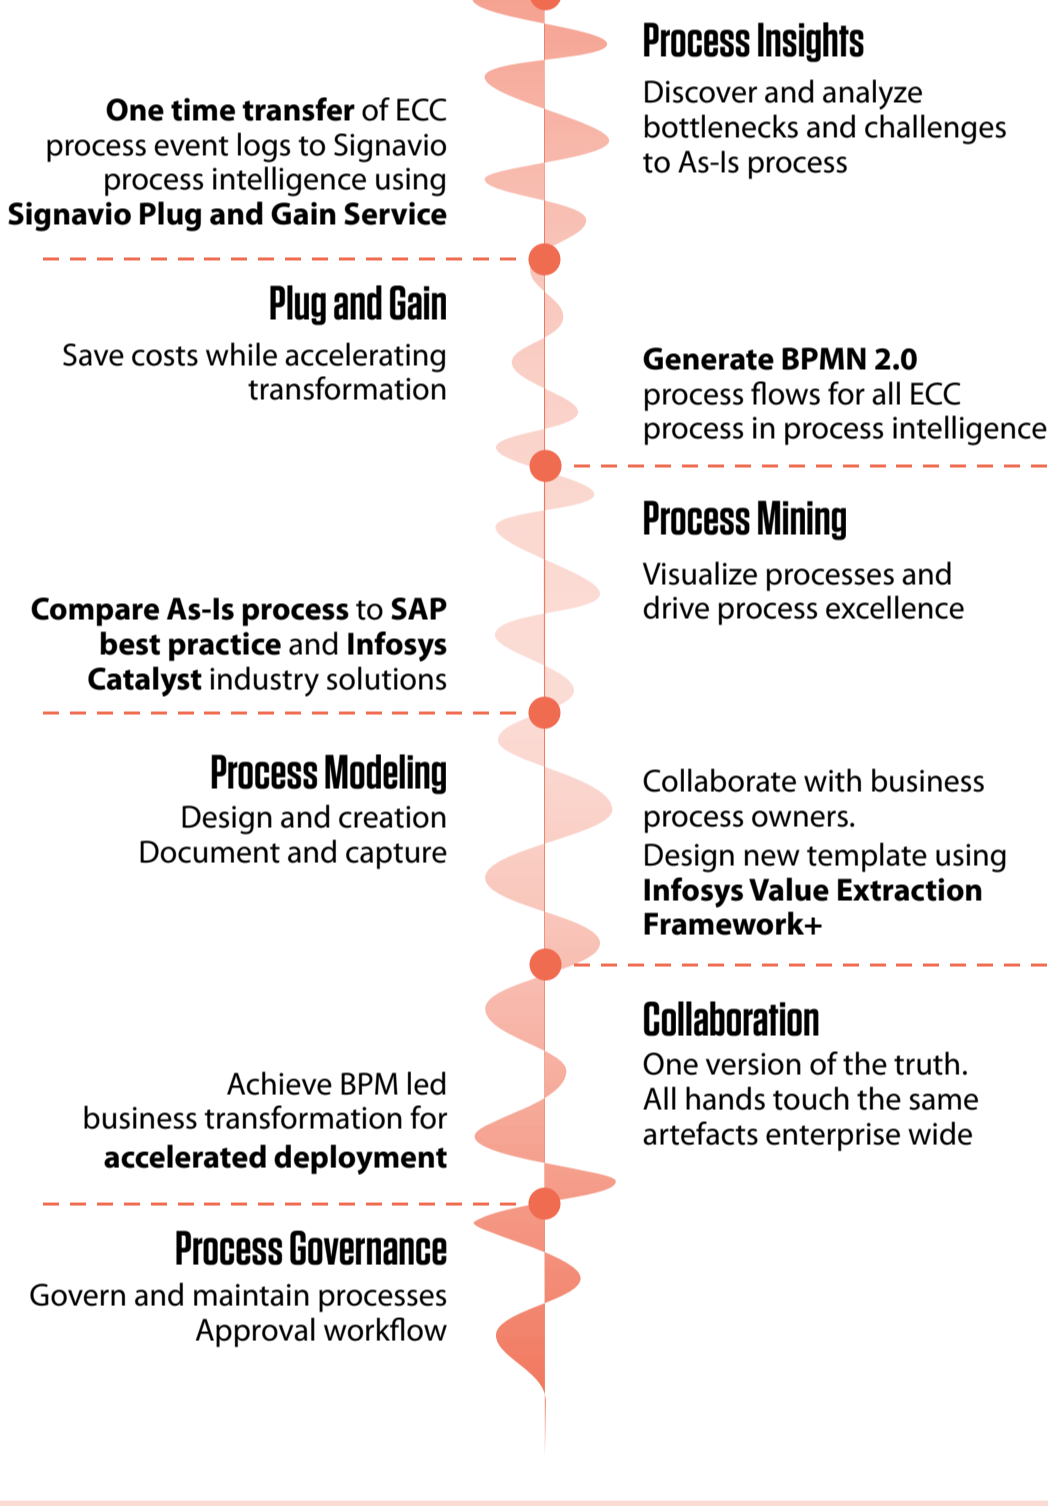

SAP Signavio BPI COE

at Infosys offer Next Generation business processes transformation services and competencies.

Infosys has leveraged its strategic partnership with SAP to create the SAP Signavio Center of Excellence. With a team of SAP Signavio-certified consultants across the globe, and dedicated service offerings, Infosys integrates SAP Signavio/Activate/RISE methodologies on S/4HANA transformations, to enable customers across industry verticals to drive their business transformation programs with speed and efficiency.
